

JOHNSTON BURKHOLDER ASSOCIATES, LLC

The structural engineering firm of Johnston Burkholder Associates, LLC was established in 1986 and now, over 20 years later, is recognized as one of the top engineering firms in Kansas City. JBA knows that providing the best possible design along with quality service is the best way to keep current clients and attract new business. We at JBA take great pride in our high level of repeat business.

JBA is a national design firm professionally registered in 49 states, excluding only Alaska. We design, detail and maintain prototypes for many large national corporations. The engineering staff at JBA has designed a wide variety of structures, and worked with every building code in the country. We are just as comfortable submitting drawings to clients in California or Florida as we are Kansas City. To ensure quality, a principal or associate oversees every project and is involved from the planning stage to the careful review of final construction. JBA maintains an error and omissions insurance policy high enough to meet the needs of our largest clients, but because of our high standards, we are rated by the insurance industry among the best engineering firms in the country.

JBA prepares all drawings using AutoCAD and the latest in engineering design software. We are accustomed to communicating with clients in cities all across the United States. One of our specialties lies in national retail accounts because we know how to handle tight budgets and quick schedules. We complete over 20 million square feet of retail each year- along with office and industrial buildings, municipal and detention facilities, churches, schools, theaters, hotels, restaurants, grocery stores, warehouses, distribution centers and many special use facilities. JBA also realizes in order to achieve a superior building, construction observation is a must. We have created our own observation group, equipped with thermal imaging equipment and rebar detection devices and our staff is trained to provide structural observations and thermal scans for masonry walls on all types of projects. Knowledge, quality and experience help JBA stand out as one of the best structural engineering firms in the business.
