

JOHNSTON BURKHOLDER ASSOCIATES, LLC

Johnston Burkholder Associates, LLC is a structural engineering consulting firm that was established in 1986. Over 30 years later, we are recognized as one of the top structural engineering firms in the Kansas City area. JBA recognizes that combining superior design with quality service, is the best way to keep current clients pleased and attract new business. Our clients remain our best references and we at JBA take great pride in our high volume of repeat business.

JBA is a national design firm professionally registered in all 50 states, the District of Columbia and Puerto Rico. We are just as comfortable delivering construction documents to clients in California or Florida as we are in our local Kansas City area. One of our specialties lies in national retail accounts. We are experienced in handling tight budgets and meeting challenging schedules. We successfully complete hundreds of retail projects each year, in addition to office and industrial buildings, municipal and detention facilities, churches, schools, theaters, hotels, restaurants, grocery stores, warehouses, distribution centers, and many special use facilities.

Our engineering staff uses the latest software to aid in our structural design. JBA prepares construction documents using Revit or AutoCAD, in accordance with the needs of our clients. We have in-office Autodesk Certified Professionals to help integrate the latest features of these programs into our deliverables. Using TEKLA Structures Building Information Modeling software, we also have the ability to prepare structural steel fabrication drawings. To ensure quality, a detailed review of every set of plans is performed by a principal or senior associate prior to final issuance.

Many clients, owners and operators request our expertise in on-site construction observation to ensure a quality structure. JBA has established and continually trains our in-house observation team. We are equipped with thermal imaging equipment, steel reinforcement detection devices and other tools necessary to review conformance with the construction documents.

JBA maintains an error and omissions insurance policy high enough to meet the needs of our largest clients. As a result of our attention to detail, quality-control measures and high standards, we are rated by the insurance industry as among the best engineering firms in the country.

Knowledge, experience, superior design and quality service have allowed JBA to successfully serve our valued clients since 1986.
